

The LiquidPlanner Difference

LiquidPlanner is an **online project management** tool built on the belief that teams work best when they **organize tasks by priority** and when they can **make best/worst case estimates**. We got tired of working overtime on projects that had us hustle and sweat to meet random goals made by rigid tools. LiquidPlanner can manage **complex tasks**, lets **teams collaborate** in one workspace, and offers **easy-to-use analytics** to measure successes. We also provide **free support** to all our customers.

Priority-based scheduling: It's how we think

The reality: Most of us are pretty good at figuring out the order in which we'll complete our tasks, but not so great at figuring out when. LiquidPlanner looks at your priorities, resources and task estimates, and then creates **realistic schedules for your projects**. When changes pop up, as they inevitably do, you enter all edits and updates, hit refresh, and the tool recalculates your entire plan. For teams who juggle multiple concurrent projects, LP shows you how each change impacts other projects, and gives you a picture of your team's capacity.

“LiquidPlanner helps our company get a real picture of our project delivery – a feature void in other project management software tools.”

— STEVE EVANS, PAYNET

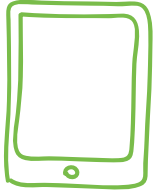

Best case/worst case time estimates

We're out to put an end to missed deadlines. That's why LiquidPlanner is structured around **best case/worst case estimates**. When you enter the amount of effort (or work) you think each task will take, those estimates roll up into the project to give teams a statistical picture of when they're likely to complete their work. LiquidPlanner lets you know well in advance if you're at risk of missing a deadline, so you can make the right changes to get back on track.

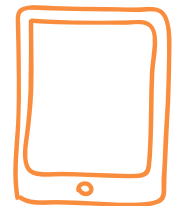

“ Since using LiquidPlanner, our directors and managers have more confidence that a project will be finished when we say it will. ”

— STEVE WATKINS, R&D ENGINEERING MANAGER AT ROTORK

One location, central and flexible

Since we're an online tool, your entire team can interact with all projects and tasks from anywhere, at any time. People can work in different locations on the same deliverables, share information and keep their plans updated and moving forward. The result is spending more time working and strategizing, and less time updating planning tools, going to meetings and answering emails – a more productive experience for everyone. Whatever your favorite methodology (agile, waterfall or ad hoc), LiquidPlanner **improves your processes and enhances collaboration**. You can also plan projects from your mobile devices by using the LiquidPlanner app for iOS and Android.

LiquidPlanner's mission:

To help teams get more of the right work done—and have fun doing it.
